

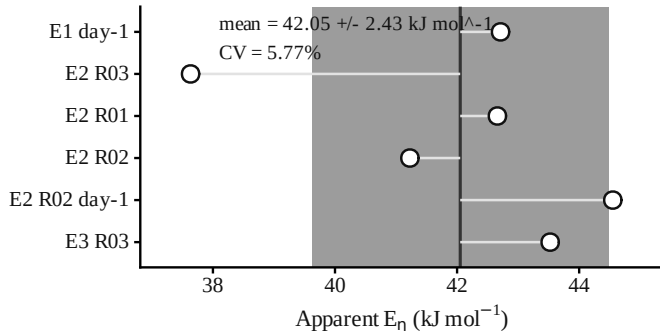

Figure 5 | Temperature response is locally concentrated while thermal-hold trajectory is formulated

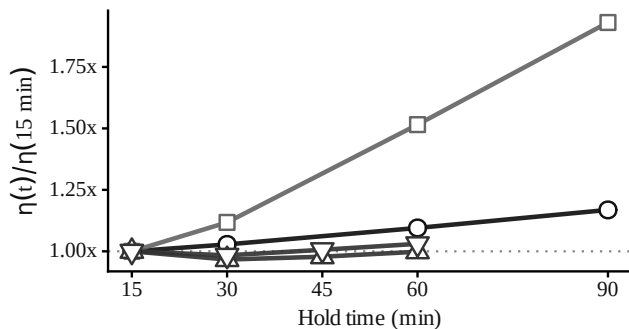

A Local temperature-response descriptor

Six chemistry-audited realizations; shaded band = mean $\pm$ 1 SD

B Thermal-hold trajectories at 120 °C

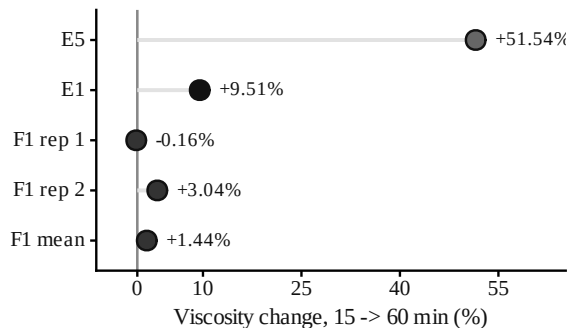

Each trajectory is normalized to its own 15 min viscosity

○ E1 □ E5 △ F1 rep 1 ▽ F1 rep 2

C Matched-window temporal drift

Observed change between 15 and 60 min; F1 mean from two repeats

D Rheological coordinates respond differently

Native descriptors are reported side-by-side; no common effect
