

a The formulation chemistry the workflow acts on

b Hard-segment association

What the hold measures

At 120 °C the composition is fixed, yet viscosity still changes with time. Drift is therefore a coordinate of its own, not a second reading of temperature response.

E1 +9.51% E5 +51.54%

15→60 min at 120 °C, same window

c One closed loop, from rheological state to physical adjudication
