

State-conditioned rheology enables experiment selection

A Local rheological structure

Nominal formulation

Repeated realizations

parallel thermal response
shifted viscosity level

realized viscosity-scale state

B State calibration and decision coordinates

One-point calibration
110–120 °C anchor

Reference viscosity
level

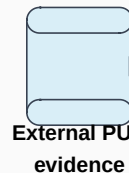

Thermal response
ST

Hold-time trajectory
St

separate coordinates

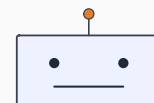

state and trajectory are distinct

C Evidence-constrained experiment selection

External PUR
evidence

Scientific policy
+ admissible region
